90min and 99min CD-Rs utilize "overburning" technology and do not comply with CD-R standards, and are not officially supported by MOST manufacturers. Therefore, this list should only be used as a guide, and not a "de facto" source.

Compatible software is also required for writing up to 99min on compatible CD-R. Nero Burning Rom is capable of these capacities, but overburning must be enabled in the Expert Preferences, and the maximum size set to the appropriate amount. At this time Easy CD Creator does not support writing beyond 80min onto a CD-R, regardless of the CD-R type.

Since new CD/DVD-Writers are being produced all the time, this list is constantly changing and being updated. If the device you are searching for isn't on this list, let us know and we will do our best to include it in the next update. New versions of this list can always be found by request at www.enovationmedia.com.

Please send all additions, questions, comments and complaints to enm@enovationmedia.com

This list is the property of eNovation Media Inc. and offered freely to all who request it. It may not be modified in any way, reprinted without permission, or sold for profit.
